Summary

I am a Fullstack Software Engineer with strong experience designing and building scalable applications through Java Spring Boot microservices and React-based frontends. Currently in the financial domain, I transform legacy Java 8 monoliths into Java 17 microservices, develop REST and SOAP APIs, implement asynchronous communication with RabbitMQ, Shovel, and Kafka, and maintain performance-critical Oracle PL/SQL. My broader background spans frontend, backend, and mobile development with JavaScript, TypeScript, React, React Native, Vue.js, Node.js, and Golang, including cross-platform plugins, payment system integrations, and building libraries from scratch. I am committed to continuous learning and delivering reliable, business-driven software.

Experience

Yapı Kredi Teknoloji **[Feb. 2025 – Present]**

Senior Software Engineer *Kocaeli, Turkiye*

- As a Fullstack Software Engineer in the Time Deposit Application Development Team, I build scalable banking and financial solutions. I lead the migration of legacy Java 8 monoliths into Java 17 Spring Boot microservices, developing REST APIs (and occasional SOAP services) and enabling asynchronous, inter-service communication with RabbitMQ, Shovel, Kafka, and Feign clients. I write and maintain performance-critical Oracle PL/SQL procedures and cursors, design and schedule Spring Boot batch jobs with UC4, and take part in alerting and monitoring of business-critical operations. On the frontend, I develop React applications using context-based state management to deliver maintainable, user-friendly interfaces.

Huawei **[Sep. 2022 – Feb. 2025]**

Software Engineer *İstanbul, Turkiye*

- Worked on various frontend and full-stack projects, including React Native plugins for Huawei Mobile Services, internal tools with React and Java Spring Boot, and large-scale applications using Vue.js and TypeScript. Contributed to open-source libraries, fintech solutions, and web performance optimization. Developed and maintained products that served millions of users globally, supporting areas such as location services, account management, education platforms, and dynamic content management.

Erciyes University IT Department **[Sep. 2022]**

Intern *Kayseri, Turkiye*

- Built a full-stack inventory management system using React.js and Node.js. Implemented features for tracking items, managing stock levels, and generating reports, improving internal processes.

CTech **[Sep. 2021]**

Intern *İstanbul, Turkiye*

- Contributed to developing a live broadcast application with Flutter and RTMP protocol. Ensured seamless integration with the live broadcast device and enhanced user experiences with video streaming and real-time interaction features.

Education

Erciyes University: Bachelor of Science in Computer Science (Sep. 2017 – May 2022) – 3.04 GPA
Kayseri, Turkey

Projects

Kindergarten Information Management Software Project
During the final year of school, collaborated with a dedicated team to develop a comprehensive information management software for kindergartens. Primarily involved in creating REST APIs using Golang for the backend and developing a web application with React. The solution significantly streamlined administrative tasks and improved the overall management of kindergarten operations.

Technical Skills

Languages: Java, JavaScript, TypeScript, Golang, SQL, PL/SQL, HTML/CSS
Frameworks & Tools: Spring Boot, React.js, React Native, Vue.js, Node.js, Redux, Tailwind CSS, Kafka, RabbitMQ, Feign, Oracle DB, PostgreSQL, REST, SOAP, Git
